

## Purchasy Policy

Social and Environmental Sustainability is a priority in our purchasing policy and we apply the following criteria as much as possible:

- We favor the purchase of products made or produced in the Canary Islands, reducing the environmental impact of unnecessary transfers, as well as favoring the economic development of our area.
- Preference of bulk products that avoid the generation of small and constant discarded containers.
- Identification of all chemical products with a dangerous pictogram in order to find alternatives with less impact both in their use and in the management of their waste. Give preference to those cleaning products without a danger pictogram and more environmentally friendly. In addition, these are products with lower foam production that allow more efficient rinse.
- Use of concentrated products that are diluted by reusing the containers used by the cleaning staff and therefore reducing the amount of waste generated.
- Carrying out awareness actions jointly with our suppliers in order to promote this efficient system.
- We demand from our suppliers strict legal compliance as well as a verification that they are approved and registered companies in the public administration (when required) ensuring all along compliance with safety, hygiene, environmental requirements and other requirements that may be needed.
